WorkforceNexa Consistency Review

https://workforcenexa.d4insight.com | Reviewed 24 Sep 2026 | Role: Superadmin | 37 modules

Verdict: the application is **not consistent**. It mixes four different visual styles, several modules report different figures for the same metric, the Sourcing section looks like a separate product, and a few pages show visible bugs.

1. Numbers that don't agree across modules

This is the most serious finding.

What's counted	Different values shown
Active people	Dashboard **2** · Employee Master **2** · User Management **17** · SOW Manager **66**
Managers	Dashboard **0** · User Management **0**, but SOW Manager and Opportunities list named owners
Bench	Dashboard **0** · User Management **5** · Bench Analysis **5**
Open opportunities	Available Opportunities **4** · Sourcing Opportunities **5**
Projects	Dashboard and Projects **0**, but SOW Manager shows 29 SOWs and 63 billable people

Different modules seem to read from different data sources. As a result, the admin Dashboard is the least reliable page in the app.

2. Bugs observed

Module	Issue
My Timesheet	Line under the title reads "Aravindalochanan Ramanujam — **undefined**".
Available Opportunities	Broken characters in job descriptions, e.g. "Tier **â€"** 2" (text encoding problem).
Employee Salaries	Superadmin account gets "Access denied", yet the page says salaries are visible to admin roles.
Team KPIs	"Offer acceptance 100%" and "Interview conversion 100%" while the same page shows 0 interviews and 0 offers accepted.
Invoices	8 invoices, all **$0**, with no client name.
Audit Logs	Looks unfinished: two unlabelled numbers (1,420 and 24) and a "Connected to backend..." message.
Pipeline Watch	Stages with 0 candidates still show a partly filled bar.
KPI Dashboard	Only an empty Employee dropdown and a blank page; no empty-state message.

3. Layout and style inconsistencies

Four page-header styles are in use

Style	Modules
Centred title, coloured icon tile, centred button	Dashboard, KPI, Analytics, Reports, Submissions, Client Timesheets, Freeze Period, My Timesheet, History, SOW, 9-Box Grid, My Tasks
Left-aligned title, button on the right	User Management, Leaves, Available Opportunities, Permission, all Finance modules
Small inline icon, no tile	Holidays, Project Management, Employee Timesheet

Style	Modules
No icon at all	Audit Logs and most of Sourcing

Other inconsistencies

- **Main button colour:** purple on most pages, orange on Invoices, Client Billing, Bench Analysis and SOW Workflow, teal on Available Opportunities.
- **Form controls:** Sourcing pages (Opportunities, Sourced Profiles, AI JD Builder, Team KPIs) use a different input style with floating labels; the rest of the app uses plain boxes with labels above.
- **Date formats:** at least five — `Sep 16, 2026`, `2026-07-06`, `8/31/2026`, `23/SEP/2026`, `mm/dd/yyyy`.
- **Breadcrumbs:** "Home" appears as text in Overview, Finance and Sourcing, but only as an icon in People and Timesheets.
- **Two "Project Management" areas:** one under People (with a Project Master tab) and Projects under Finance. They overlap.
- **Summary cards:** at least five designs (big icon above, small icon on the right, top coloured border, plain text, gradient tiles). AI Reports is the most different.
- **Sourcing Dashboard** has a large photo banner that no other module has.

Menu names that don't match page titles

Menu item	Page title shown
Permission	Permissions
SOW Workflow	SOW Manager
SOW Manager	SOW Management
Employee Timesheet	D4 Timesheet for the month of ...
Projects	Projects Directory
Sourced Profiles	View/Decision Profiles

4. Most consistent parts

Timesheets and Overview mostly share one design: centred header, icon tile, summary cards and tables. Finance is consistent within itself, just not with Timesheets. Empty-state messages (grey icon, heading, hint) are mostly uniform across the app.

5. Suggested order to fix

1. **Use one source of data** for headcount, bench, projects and opportunities, so the Dashboard agrees with the detail pages.
2. **Fix the visible bugs:** "undefined", broken characters, Superadmin locked out of salaries, the impossible 100% KPIs, and the unfinished Audit Logs page.
3. **Pick one page-header style, one main button colour, one input style and one date format,** and apply them everywhere, starting with the Sourcing section.
4. **Make menu names match page titles,** and sort out the duplicate SOW and Project modules.

Scope

Only each module's opening screen was reviewed. Tabs, dialogs and form submissions were not exercised, so there may be further issues deeper in.
